

RaML 15150 Tests Summary

Yinglan Chen

March 27, 2020

1 HW1

Implement factorial function. The rest cannot be implemented since RaML does not support real numbers.

2 HW2

Implement all functions, but cannot solve error message "A bound for {function name} could not be derived. The linear program is infeasible"

3 HW3

Cannot find a good way to test/assert in RaML.
Functions that works:

`take, bake, take_work, heads, prefixSumHelp, prefixSumFast, subsequence, helper`

Functions infeasible:

`tails, filterInt, look_and_say, look_say_table, add_to_each, prefixSum, subrun, subset_sum, subset_sum_cert`

4 HW4

type supports `int * tree * tree` but not `tree * int * tree`, so following code has to change according to that.
Analyze mode works normally.

5 HW5

cannot support poly type since RaML does not support real.
